Email: chanduum9844@gmail.com| Phone: +91-8553729979| LinkedIn: linkedin.com/in/chandu-am-4a913927b

CAREER OBJECTIVE

Aspiring software engineer seeking to contribute technical skills and innovative thinking to a dynamic organization, while building a strong professional foundation in software development.

TECHNICAL SKILLS

Languages: Java, JavaScript, C, Python

Frameworks & Libraries: React, Node.js, Express.js

Tools & Platforms: VS Code, Eclipse, PyCharm, Jupyter Notebook, Git, GitHub

Databases: MySQL, MongoDB

Areas of Interest: Full-Stack Development, Front-End Engineering, Python Programming

Soft Skills: Problem-Solving, Adaptability, Leadership, Troubleshooting

EDUCATION

B.E. in Computer Science & Engineering — *Jain Institute of Technology, Davangere, Karnataka* (Pursuing) | **CGPA: 9.1**

Class 12 (PCMB) — *SJM Independent PU College, Chitradurga, Karnataka* | **2022** | **80.3%**

Class 10 (CBSE) — *Indian International School, Chitradurga, Karnataka* | **2020** | **86%**

CERTIFICATIONS

- Introduction To Operating System
- Introduction To Java Programming
- Cloud Computing
- Introduction To C Programming

ACHIEVEMENTS & RECOGNITION

- Secured 2nd Place in 2nd Year Academics
- Secured 2nd Place in mini-project Exhibition for Operating System (May 2025)
- Participated in the Emerge State-Level Competition, JIT Davangere.

PROJECTS

Asset Tracking System:

An Asset Tracking System helps institutions effectively manage their assets throughout their lifecycle from disposal. It ensures that all institutional assets are properly recorded, maintained, and utilized efficiently. This system minimizes loss, theft, and duplication, while also improving accountability and transparency

Cat vs Dog Image Classification using Deep Learning (CNN):

Developed a Convolutional Neural Network (CNN) model to classify images of cats and dogs with high accuracy. Utilized TensorFlow and Keras for model building and training. The dataset was preprocessed using data augmentation and image normalization techniques to enhance model generalization.

Implemented layers such as convolution, pooling, and dropout to prevent overfitting.

Sign Language Detection:

Sign language detection is an assistive communication system that helps hearing- and speech-impaired individuals communicate with others. It uses a camera to capture sign language gestures and applies computer vision and machine learning techniques to recognize the signs. The detected signs are converted into readable text and audible speech, enabling effective and real-time communication. This technology reduces communication barriers and improves accessibility for differently-abled individuals

TRAININGS

- Completed 1-month hands-on training by *Seventh Sense Talent Solutions, Bengaluru*.
- Attended ICT Training Workshop, *Bengaluru*.

DECLARATION

I hereby declare that the above information is true and correct to the best of my knowledge and belief.
